Textbook Solutions and Answers | Chegg.com

Using a little linear algebra, you can show linear combinations of more complicated vectors. As an example, the vector $(7, 11, 15)$ is a linear combination of the vectors $(1, 1, 1)$ and $(1, 2, 3)$ With Chegg Study, you can get step-by-step solutions to your questions from an expert in the field. Your first 30 minutes with a Chegg tutor is free!

Linear Function: Simple Definition, Example, Limit - Calculus How To

From here on, use algebra to solve. This equation can be solved with the quadratic formula: You should be able to see on the graph that the highest point of the function in $x = 0$. The other value $x = 2$ will be the local minimum of the function. Second Derivative Test. For the example above, it's fairly easy to visualize the local maximum.
