The end is in sight now. This is the last thing we have to learn - debugging subnet-based networking issues by reverse-engineering the IP address and subnet mask to determine the network ID and broadcast address. As we may remember from the very beginning of the course, a device can only communicate with something on a network it belongs to.

used on the A320. In a previous MEL the standard procedure for selecting reverse thrust in case of one unserviceable thrust reverser was to retard both levers to idle, but then select reverse thrust only for the working reverser. As in the case for two u/s thrust reversers, not selecting reverse thrust with unarmed Ground Spoilers presents a

I understand the basics to subnetting (creating a certain number of subnets or making subnets based on the hosts needed, etc) but with reverse engineering I am just plain slow. When the increment is larger it is fine as the number of subnets is less but when when the increment is 16 or less and the question asks which subnet the host is on, or ...
